

BDJ BRAIN

BDJ Brain is a digital recorder for blowing machines. BDJ Brain allows you to register and save important parameters of the blowing process. Recorded parameters are saved in recorder's memory and into a USB flash drive in PDF format. Final report is available as a protocol or a diagram. With the device you can record the following: **location of the construction site, pressure in the micro duct, pushing force, speed of blowing, length of the blown cable, ambient parameters: temperature and air humidity.**

The BDJ Brain recorder offers:

- the geographic location of the construction site - GPS;
- pressure in the microduct;
- pushing force;
- the speed of blowing in the cable;
- length of the blown cable;
- environmental parameters - temperature and air humidity.
